

PDA1500-STATION / PDA3000-STATION series

pure sine wave

Power DC-AC Inverter

Multi-function INVERTER/CHARGER: inverter + MPPT solar charger + battery charger

1. INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

2. FEATURES

- Pure sine wave inverter.
- Configurable input voltage range for home appliances and personal computers via LCD setting Configurable battery charging current based on applications via LCD setting.
- Configurable AC/Solar Charger priority via LCD setting.
- Compatible to mains voltage or generator power.
- · Auto restart while AC is recovering.
- Overload/ Over temperature/ short circuit protection.
- Smart battery charger design for optimized battery performance.
- · Cold start function.
- MPPT mode regulation charger.

3. BASIC SYSTEM ARCHITECTURE

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- · Generator or Utility.
- PV modules (option).

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

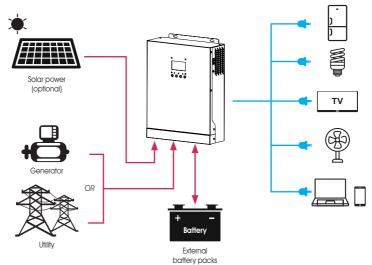

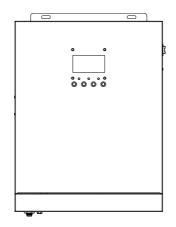

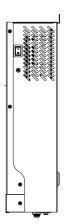

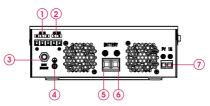

Fig. 1 - Hybrid power system

4. PRODUCT OVERVIEW

Indication

- 1 AC Input
- 2 AC Output
- (3) Circuit breaker
- 4 Safety (Earth) ground
- 5 Battery positive
- 6 Battery negative
- 7 PV Input
- 8 ON / OFF
- 9 RS232 communication

5. INSTALLATION

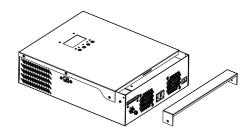

5.1 Unpacking and Inspection

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

- The unit x 1
- User manual x 1
- Communication cable x 1
- Software CD x 1

5.2 Preparation

Before connecting allwirings, please take off bottom cover by removing two screws as shown below.

20cm

5.3 Mounting the unit

Consider the following points before selecting where to install:

- Do not mount the inverter on flammable construction materials.
- · Mount on a solid surface.
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 20 cm to the side and approx. 50 cm above and below the unit.
- \bullet The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

Install the unit by screwing three screws. It's recommended to use M4 or M5.

20cm

OTHER

5.4 Battery connection

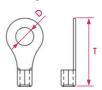

Caution:

For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable and terminal size as below.

Ring terminal

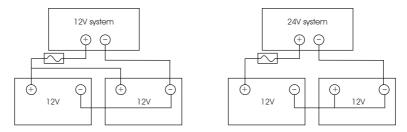

Recommended battery cable and terminal size:

			Beller		R	Ring terminal		T			
Model	Input voltage	Typical amperage	Battery capacity		Wire size	Cable	Dime	nsions	Torque value		
				mm²	D (mm)	L (mm)					
PDA3000-STATION	24V	100A	100AH	2*8AWG	14	6.4	29.2				
	12V	TOOA	TOUA	1004	TOOA	200AH	1*4AWG	22	6.4	33.2	2~3 Nm
PDA1500-STATION	0.4\/	50A	100411	1*6AWG	14	6.4	29.2	2~3 NIII			
	24V 50A 100AH	TOUAH	2*10AWG	8	6.4	23.8					

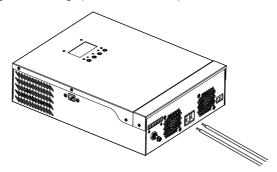

Please follow below steps to implement battery connection:

- 1. Assemble battery ring terminal based on recommended battery cable and tenminal size.
- PDA1500-STATION model supports 12VDC or 24VDC system. Connect all battery packs as below chart. It's suggested to connect at least 100Ah.

Note: Please only use sealed lead acid battery or sealed GEL/AGM lead-acid battery.

3. Insert the ring terminal of battery cable flatly into battery connector of inverter and make sure the bolts are tightened with torque of 2-3 Nm. Make sure polarity at both the battery and the inverter/charge is correctly connected and ring terminals are tightly screwed to the battery terminals.

⚠ Warning: Shock Hazard

Installation must be performed with care due to high battery voltage in series.

Caution!! Do not place anything between the flat part of the inverter terminal and the ring tenminal. Otherwise, overheating may occur.

Caution!! Do not apply anti-oxidant substance on the tenminals before terminals are connected tightly.

Caution!! Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

5.5 AC Input/Output connection

Caution!! Before connecting to AC input power source, please install a **separate** AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 10A for PDA1500-STATION, 32 A for PDA3000-STATION.

Caution!! There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

Suggested cable requirement for AC wires.

Model	Gauge	Torque value
PDA1500-STATION	14AWG	0.5~0.6 Nm
PDA3000-STATION	12AWG	1.2~1.6Nm

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3mm.
- Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws.
 Be sure to connect PE protective conductor ((-)) first.

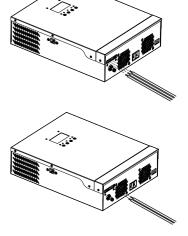

Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws.
Be sure to connect PE protective conductor () first.

5. Make sure the wires are securely connected.

Caution: Important!!

Be sure to connect AC wires with correct polarity. If L and N wires are connected reversely, it may cause utility short-circuited when these inverters are worked in parallel operation.

Caution:

Appliances such as air conditioner are required at least $2\sim3$ minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

5.6.PV CONNECTION

PV Module selection for MPPT mode.

Inverter model	PDA1500-STATION		PDA3000-STATION	
Rated out power	12V	24V	24V	
Charging current (PWM)	40A max.			
Max. PV Arrray open circuit voltage	102		02	
MPPT operating voltage range	17-80V 30-80VDC		30-80VDC	

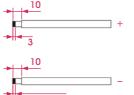

Take 300Wp PV module as an example. After considering above two parameters, the recommendesd module configurations are listed as below table.

Inverter model	PDA 1 500-STATION		PDA3000-STATION		
Rated out power	300W	12V	24V	24V	
Maximum power (Pmax)	32.75A				
Max. Power current Immp (A)	8.93A	2 pieces	2 pices in serial		
Open circuit voltage Voc (V)	in spring		and ets in parallel		
Short circuit current Isc (A)	9.78A	-			

Please follow below steps to implement PV module connection:

- 1. Remove insulation sleeve 10mm for positive and negative conductors.
- Check correct polarity of connection cable from PV modules an PV input connectors. Then, connect positive pole (+) of connection cable to positive pole (+) of PV input connector. Connect negative pole (-) of connection cable to negative pole (-) of PV input connector.
- 3. Make sure the wires are securely connected.

5.7. Final Assembly

After connecting all wirings, please put bottom cover back by screwing two screws as shown below.

5.8. Communication connection

Please use supplied communication cable to connect to inverter and PC. Insert bundled CD into a computer and follow on-screen instruction to install the monitoring software. For the detailed software operation, please check user manual of software inside of CD.

5.9 Dry contact signal

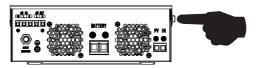

There is one dry contact (3A/250VAC) available on the rear panel. It could be used to deliver signal to external device when battery voltage reaches warning level.

Unit status	atus Condition				Dry contact port:		
		NC & C	NO & C				
Power OFF	Unit is off and no outp	out is powered.		Close	Open		
	Output is powered fro	om Utility		Close	Open		
		Program 01 set as Utility	Battery voltage < Low DC warning voltage	Open	Close		
	Output is powered from Battery or Solar		Battery voltage > Setting value in Program 13 or battery charging reaches floating stage	Close	Open		
		Program 01 is set as SBU or Solar first	Battery voltage < Setting value in Program 12	Open	Close		
			Battery voltage > Setting value in Program 13 or battery charging reaches floating stage	Close	Open		

6. OPERATION

6.1 Power ON/OFF

Once the unit has been properly installed and the batteries are connected well, simply press ON/OFF switch (located on the button of the case) to turn on the unit.

6.2 Operation and Display panel

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

LED Indicator

Led indicator			Messages
		Solid ON	Output is powered by utility in Line mode.
* AC / * INV	Green	Flashing	Output is powered by battery or PV in battery mode.
-¥- 0110	V	Solid ON	Battery is fully charged.
★ CHG	Green	Flashing	Battery is charging.
A FAULT Door		Solid ON	Fault occurs in the inverter.
△ FAULT	Red	Flashing	Warning condition occurs in the inverter.

Function KEYs

Function Key	Description			
ESC	To exit setting mode.			
UP	To go to previous selection.			
DOWN	To go to next selection.			
ENTER	To confirm the selection in setting mode or enter setting mode.

6.6 Operating mode descritption

Operation mode	Description	LCD display
Standby mode / Power saving mode Note: * Standby mode: The inverter is not turned on yet but at this time, the inverter can charge battery without AC output. * Power saving mode: If enabled, the output of inverter will be off when connected load is pretty low or not detected.	No output is supplied by the unit but it still can charge batteries.	Charging by utility. Charging by utility. Charging by PV energy. No charging.
Fault mode Note: * Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	PV energy and utility can charge batteries.	Charging by utility and PV energy. Charging by utility. Charging by utility. Charging by PV energy.

Operation mode	Description	LCD display
Fault mode Note:	PV energy and utility can charge batteries.	No charging
* Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	Utility can power loads when the unit starts up without battery.	Power from utility
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	Charging by utility and PV energy. EYPASS Charging by utility EYPASS Charging by utility EYPASS CHARGING OHARGING EYPASS CHARGING
Battery mode	The unit will provide output power from battery and PV power.	Power from battery and PV energy. Power from battery only.

Battery equalization description

Equalization function is added into charge controller. It reverses the buildup of negative chemical effects like stratification, a condition where acid concentration is greater at the bottom of the battery than at the top. Equalization also helps to remove sulfate crystals that might have built up on the plates. If left unchecked, this condition, called sulfation, will reduce the overall capacity of the battery. Therefore, it's recommended to equalize battery periodically.

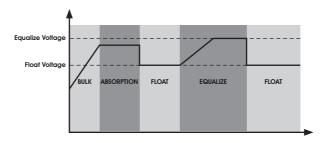

How to apply equalization function

You must enable battery equalization function in monitoring LCD setting program 30 first. Then, you may apply this function in device by either one of following methods:

- 1. Setting equalization interval in program 35.
- 2. Active equalization immediately in program 36.

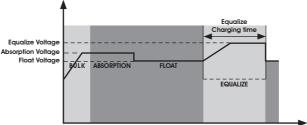

When to equalizer

In float stage, when the setting equalization interval (battery equalization cycle) is arrived, or equalization is active inmediately, the controller will start to enter Equalize stage.

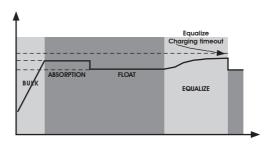

Equalize charging time and timeout

In Equalize stage, the controller will supply power to charge battery as much as possible until battery voltage raises to battery equalization voltage. Then, constant-voltage regulation is applied to maintain battery voltage at the battery equalization voltage. The battery will remain in the Equalize stage until setting battery equalized time is arrived.

However, in Equalize stage, when battery equalized time is expired and battery voltage doesn't rise to battery equalization voltage point, the charge controller will extend the battery equalized time until battery voltage achieves battery equalization voltage. If battery voltage is still lower than battery equalization voltage when battery equalized timeout setting is over, the charge controller will stop equalization and return to float stage.

6.7 Fault reference code

Fault code	Fault Event	lcon on
01	Fan is locked when inverter is OFF.	
02	Over temperature.	.50
03	Battery voltage is tooo high.	[E]
04	Battery voltage is too low.	[04]-
05	Output short circuited ar over temperature is detected by internal converter components.	[05]
06	Output voltage is abnormal.	<u></u> 60
07	Overload time out.	[0]
08	Bus voltage is tooo high.	_80
09	Bus soft start failed.	.09,
11	Main relay failed.	

6.8 Warning indicator

Warning code	Warning event	Audible alarm	lcon flashing
01	Fan is locked when inverter is ON.	Beep three times every second.	
03	Battery is over-charged.	Beep once every second.	<u>~</u> EOJ
04	Low battery.	Beep once every second.	[]Y^
07	Overload.	Beep once every 0.5 second.	OVER LOAD
10	Output power derating.	Beep twice every 3 seconds.	
12	Solar charger stops due to low battery.		[12]^
13	Solar charger stops due to high PV voltage.		[13]^
14	Solar charger stops due to overload.		
E9	Battery equalization		[594

7. SPECIFICATIONS

Table 1 - Line mode specifications

Inverter model	PDA1500-STATION		PDA3000-STATION	
Input voltage	12V	24V	24V	
Input voltage waveform	Sinusoidal (utility or generator)			
Nominal input voltage	230Vac			
Low loss voltage	170Vac±7V (UPS); 90Vac±7V (Appliances)			
Low loss return voltage	180Vac±7V (UPS); 100Vac±7V (Appliances)			
High loss voltage		280Vac±7V		
High loss return voltage	270Vac±7V			
Max AC input voltage		300Vac		
Nominal input frequency	50Hz / 60Hz (Auto detection)			
Low loss frequency	40±1Hz			
Low loss return frequency	42±1Hz			
High loss frequency	65±1Hz			
High loss return frequency	63±1Hz			
Output short circuit protection	Circuit Breaker			
Efficiency (Line mode)	95% (Rated R load, battery full charged)			
Transfer time	10ms typical (UPS); 20ms typical (Appliances)			
Output power derating: When AC input voltage drops to 170V, the output power will be derated.	Output power Rated power 50% power	90V 170V	280V Input voltage	

Table 2 - Inverter mode specifications

Inverter model	PDA1500-STATION		PDA3000-STATION	
Nominal DC input voltage	12V	24V	24V	
Rated output power	1200W 2400W			
Output voltage waveform		Pure sine wave		
Output voltage regulation		230Vac±5%		
Output frequency		50Hz		
Peak efficiency		95%		
Overload protection	5s@≥c150	1% load; 10s@110%~	-150% load	
Surge capacity	2*rated power for 5 seconds			
Cold start voltage	11.5Vdc 23.0Vdc			
Low DC Warning voltage				
@load<20%	11.0Vdc 22.0Vdc			
@20%≤load<50%	10.7Vdc 21.4Vdc			
@load≥50%	10.1Vdc 20.2Vdc			
Low DC Warning return voltage				
@load<20%	10.5Vdc	21.0Vdc		
@20%≤load<50%	10.2Vdc	20.4Vdc		
@load≥50%	9.6Vdc	19.2Vdc		
High DC cut-off voltage	15.5Vdc 31.0Vdc)Vdc	
No load power consumption	<15W <2		<20W	
Saving mode power consumption	<5W		<10W	

Table 3 - Inverter mode specifications

Inverter mode	I	PDA150	0-STATION	PDA3000-STATION	
Nominal DC in	put voltage	12V	24V	24V	
Charging algorithm		3-step			
AC Charging o	current	10/20Amp 20/30		mp (@V _{I/P} =230Vac)	
Flooded battery		14.6		29.2	
voltage	AGM / Gel battery	14.1	14.1 28.2		
Floating charging voltage		13.5Vdc	3.5Vdc 27Vdc		
		Battery voltage, per cell		Chargin current, %	
Charging curve		2.43Vdc (2.35Vdc) 2.25Vdc	11	Voltage 100% 50%	
		BULK (constant curr	Ti = 10*T0, minimum 10mins, maximum 8hrs ABSORPTION (constant voltage)	Current MAINTENANCE (floating)	

Table 4 - General specifications

Inverter model	PDA1500	PDA3000-STATION		
Rated out power	12V	24V	24V	
Max. current	40A max.			
Max. PV array open circuit voltage	102V			
MPPT operating voltage range	17-80V 30-80V			
Max. charging current (utility charging + solar charging)	60A	70A		

8. TROUBLE SHOOTING

Problem	LCD / LED / Buzzer Explanation / Possible cause		What to do	
Unit shuts down automatically during startup process.	LCD/LEDs and buzzer will be active for 3 seconds and then complete off.	The battery voltage is too low (<1.91V/Cell) .	Re-charge battery. Replace battery.	
No response after power on.	No indication.	The battery voltage is far too low. (<1.4V/Cell) Battery polarity is connected reversed.	Check if batteries and the wiring are connected well. Re-charge battery. Replace battery.	
Mains exist but the unit works in battery mode.	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped.	Check if AC breaker is tripped and AC wiring is connected well.	
	Green LED is flashing.	Insufficient quality of AC power. (Shore or Generator).	Check if AC wires are too thin and/or too long. Check if generator (if applied) is working well or if input voltage range setting is correct. (UPS → Appliance)	
	Green LED is flashing.	Set "Solar First" as the priority of outout source.	Change output source priority to Utility first.	
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing.	Battery is disconnected.	Check if battery wires are connected well.	
Buzzer beeps continuously and red LED is on.	Fault code 07.	Overload error. The inverter is overload 110% and time is up.	Reduce the connected load by switching off some equipment.	
	Fault code 05.	Output short circuited.	Check if wiring is connected well an remove abnormal load.	
		Temperature of internal converter component is over 120°C.	Check whether the air flow of the unit is blocked or whether the ambient temperature is too high.	
	Fault code 02.	Internal temperature of inverter component is over 100°C.		
	Fault code 03.	Battery is over-charged.	Return to repair center.	
		The battery voltage is too high.	Check if spec and quantity of batteries are meet requirements.	
	Fault code 01.	Fan fault.	Replace the fan.	
	Fault code 06.	Output abnormal (inverter voltage below than 190Vac or is higher than 260VAC).	Reduce the connected load. Return to reoair center.	
	Fault code 08/09.	Internal components failed.	Return to repair center.	

9. APPENDIX: Approximate Back-up Time Table

Model	Load (VA)	Backup Time @ 12Vdc 100Ah (min)	Backup Time @ 12Vdc 200Ah (min)
	100	766	1610
	200	335	766
	300	198	503
	400	139	339
DDA1500 STATION (10V)	500	1112	269
PDA1500-STATION (12V)	600	95	227
	700	81	176
	800	62	140
	900	55	125
	1000	50	112
	300	449	1100
	600	222	525
	900	124	303
PDA1500-STATION (24V) PDA3000-STATION	1200	95	227
	1500	68	164
	1800	56	126
	2100	48	108
	2400	35	94
	2700	31	74
	3000	28	67

Note: Backup time depends on the quality of the battery, age of battery and type of battery. Specifications of batteries may vary depending on different manufacturers.
