remote control - **4 ZONES** control
LENNY-MD-092

Smart LED control system

New smart LED **color control system** with 2.4GHz remote control.

Auto synchronisation and **auto transmission** functions.

The device adopts low power consumption technologies
and one controller can manage several receivers at the same time.

The system does not produce interference as it uses a very low level transmission signal.

Suitable for simple installations in both domestic and professional environments.

Smart LED control system

LENNY-MD-092 4 ZONES control

Smart LED control system

Technical specifications

Remote control	
Model	LENNY-MD-092
Voltage	3V (2 AAA batteries)*
Emitting power	6dBm
Standby current	20uA
Working temperature	-20~60°C
Working frequency	2400-2483.5MHz
Modulation type	GFSK
Aprox. operational distance	30m

* Not included.
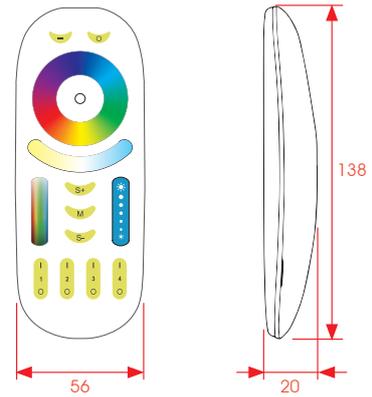

DIRECT CURRENT DRIVERS			
	LENNY-DRV-LS2	LENNY-DRV-WL5	LENNY-DRV-WL2P
Description	5 in 1 receiver	WiFi 5 in 1 receiver	WiFi 2 in 1 receiver
Voltage	DC12V~24V (terminal block & jack plug inputs)		
Output max. current	6A per channel		12A per channel
Total current	15A		12A
Working temperatue	-20~60°C		-10~40°C
Working frequency	2.4GHz		
Aprox. operational distance	30m		
Connection mode	Common anode		
WIFI	Requires gateway LENNY-WIFOX1	Included	
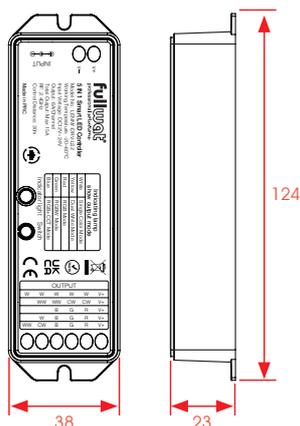

LENNY-DRV-LS2
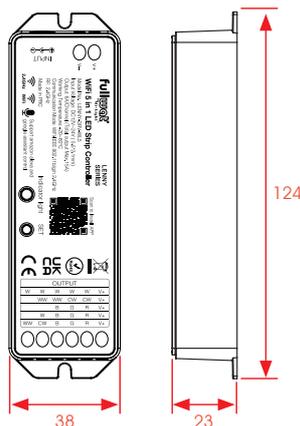

LENNY-DRV-WL5
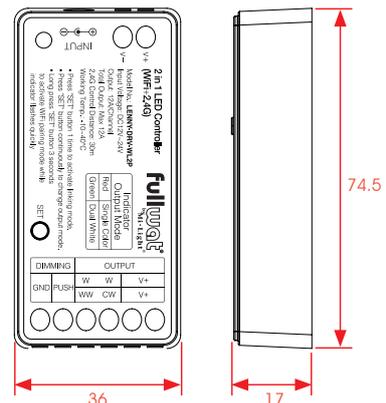

LENNY-DRV-WL2P

LENNY-MD-092 4 ZONES control

Smart LED control system

Technical specifications

ALTERNATE CURRENT DRIVER	TRIAC controller
Model	LENNY-TRIAC1
Input voltage	AC 100-240V 50/60Hz
Output voltage	AC 100-240V
Ouput current	MAX 1.36A
Output power	150W@100VAC; 300W@240VAC
Regulation method	Wireless RF, push button, APP
RF range	30m
Working temperature	-10-40ºC
WIFI	Requires gateway LENNY-WIFOX1

WIFI GATEWAY	
Model	LENNY-WIFOX1
Working voltage	DC5V/500mA (Micro USB)
Working temperature	-20~60ºC
Communication	WiFi-IEEE 802.11b/g/n 2.4GHz
Working frequency	2.4GHz
Transmission power	6dBm

* Suggested AC/DC adaptors (not included):   MWMU10GS
FU-ADPY10-5-USB

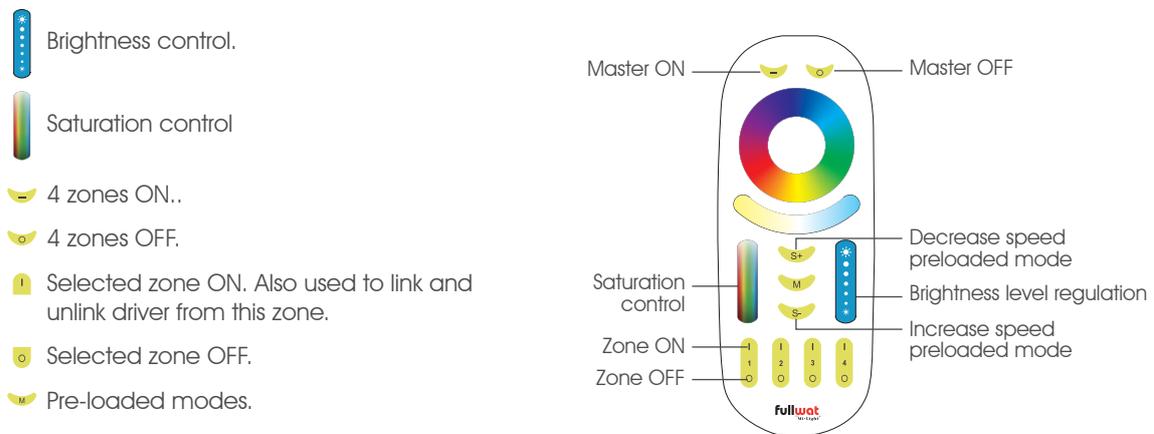

LENNY-MD-092 4 ZONES control
Smart LED control system

System linking and unlinking

Note: The light only works after the controller is paired with one or more receivers.

Linking. Place Remote controller close to the desired driver to be paired.

Before starting linking process, configure receiver according to the type of LED strip. Refer to "wiring diagram" section (previous point) from the manual.

power supply | receiver

link/unlinknk button

power supply | receiver
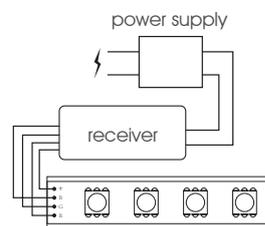

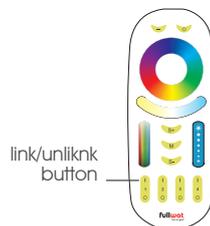

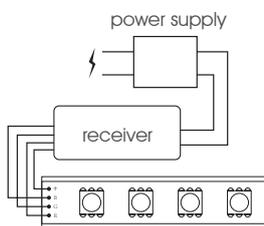

⚠️ If light does not flash slowly, the bonding is not done. Repeat the process until this occurs.

1. Switch off power supply and after 10 seconds, switch it on again.

Note: For LENNY-DRV-WL2P or LENNY-TRIAC1, press the SET button once to enter pairing mode.

2. Press ON button on the remote control 3 times within a maximum period of 3 sec.

3. The light will flash 3 times slowly to indicate successful pairing.

Unlinking

power supply | receiver

link/unlinknk button

power supply | receiver
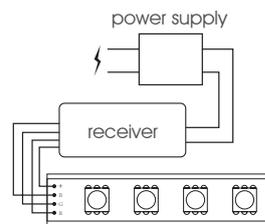

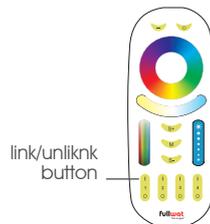

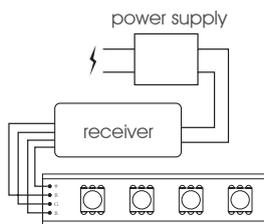

⚠️ If light does not flash quickly, the bonding is not done. Repeat the process until this occurs.

1. Switch off power supply and after 10 seconds, switch it on again.

Note: For LENNY-DRV-WL2P or LENNY-TRIAC1, press the SET button once to ente   r pairing mode.

2. Press ON button on the remote control 5 times within a maximum period of 3 sec.

3. The light will flash 10 times quickly to indicate that unlinking is successful.

Attention

1. ⚠️ **Please check if input voltage is compatible with voltage supported by the driver. Pay special attention not to cross positive and negative poles.**
   Reversed connection will damage the controller.

2. Do not connect the cables while the power supply is on. Turn it on when you are sure of connections are correct and there is no short circuit is possible.

3. Avoid placing driver controller in areas influenced by electromagnetic fields or close to devices that produce electromagnetic fields. Also, do not place driver controller in areas shielded by metal surfaces or where metal surfaces come between the control and the controller.

   This would affect operating distance effectiveness.

LENNY-MD-092 4 ZONES control
Smart LED control system

Device auto-sync

Different receiver drivers can be connected to operate with the same remote controller and operate in the same modes.

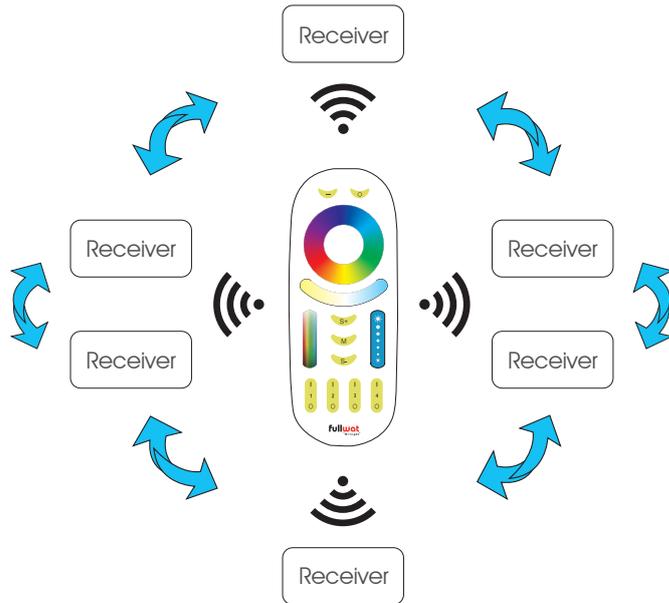

Notes:

1. : Self emitting indication.

2. Remote driver controllers can be paired with the same remote controller within a maximum range of 30 meters. (possible where as free or semi-free spaces and without too many obstacles or walls).
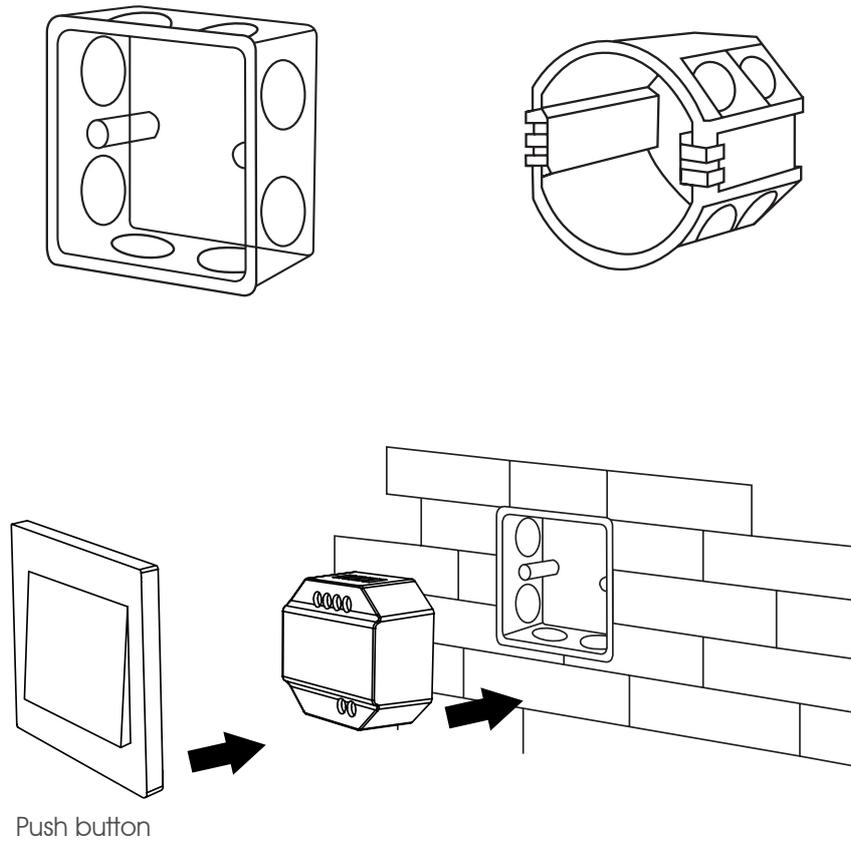

Auto-transmitting function

A single remote controller may transmit control signals in succession to other driver controllers provided if maximum coverage distance of 30m is respected between them.
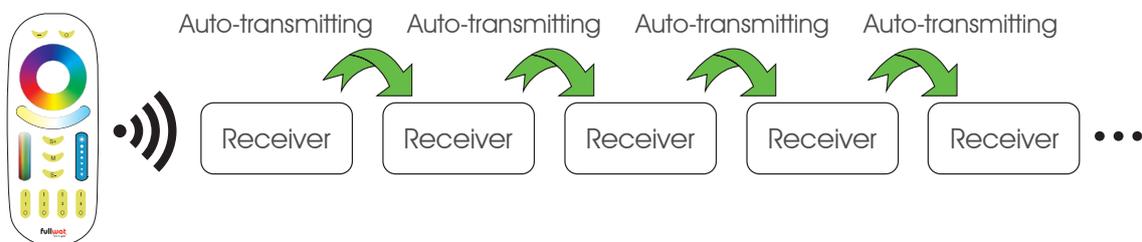

LENNY-MD-092 4 ZONES control

Installation diagram - LENNY-TRIAC1

Push button

LENNY-MD-092 4 ZONES control

Smart LED control system

Mobile phone pairing

Download and install the application on your mobile phone:

a. Via QRI code

b. Searching the Play Store for "MiBoxer".

To link our installation with our mobile phone, we will need one of these drivers:

– LENNY-DRV-WL5
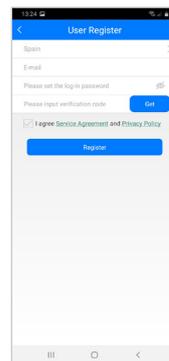

– LENNY-DRV-WL2P

– LENNY-DRV-LS2 + LENNY-WIFOX1

– LENNY-TRIAC1 + LENNY-WIFOX1

Register in MiBoxer:
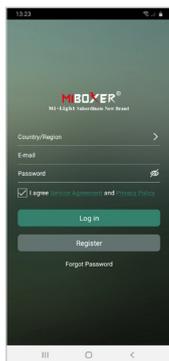

| Insert your email adress | Insert your country | Choose password | Accept conditions and terms |
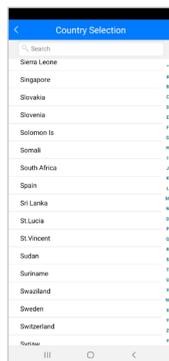

We will receive an e-mail with a registration verification code, which we will have to enter in the application to finish registering account.

In order to use the application, we must activate GPS on our mobile phone (either Android or Apple).

Once on the main screen and our session started, we must add the device. To do this:

Push "+" to add device
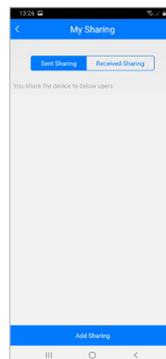

Push "add sharing".

LENNY-MD-092 4 ZONES control

Smart LED control system

Mobile phone pairing

Select device model:

For model LENNY-DRV-WL5:
Click on "Smart Strip Controller (WL5)".

For model LENNY-DRV-WL2P:
Click on "LED controller (FUT035W-FUT039W)".

For model LENNY-DRV-LS2 or model LENNY-TRIAC1:
Click on "2.4GHz Gateway (WL-Box1)".

For model LENNY-DRV-WL5:
Disconnect power supply from LENNY-DRV-WL5 for 10 sec.
After 10 seconds, power the controller and within the first three seconds, press and hold "SET" button on the receiver until LED on the receiver flashes.

**For models LENNY-DRV-WL2P / LENNY-DRV-LS2 / LENNY-TRIAC1:**
Press SET button on device or on WIFI gateway for 3 seconds to activate WIFI signal.

In both cases, on the phone screen, click on "Ensure pilot lamp blinking".
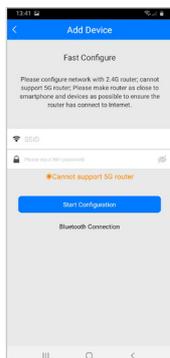

Enter network name and password.

Attention: only 2.4GHz network is supported (no 5G) and click on "Start configuration".
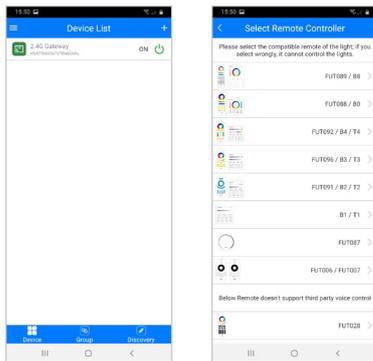

A countdown will appear and once paired, it will indicate that pairing has been successful.

Our device will appear in the list of paired devices.

LENNY-MD-092 4 ZONES control

## Smart LED control system

Mobile phone pairing

Wether we have to use the WIFI gateway (LENNY-WIFOX1):

We must link the driver to be controlled via the APP.
To do this, click on 2.4GHz gateway.

First we must choose whether we are going to configure one or more zones. In this case, as it is a zone, we enter the "change" section and select FUT092/B4/T4.

On the screen of our mobile phone we will see image as follows:

If you want to change the remote control / remote panel, click on "change" and select the one you have chosen from the list.

Color ring

ON / OFF

Change temperature color if our connected device allows it.

Brightness control

Zone

Timer

Link / Unlink

Click on "Link/Unlink".

Click on "link" to link and on "unlink" to unlink.

Remove the power supply to controller for 10 seconds.

After 10 seconds, power the controller and in the first 3 seconds, click on the mobile screen on "link" or "unlink".

The light will flash three times and confirm correct linking.

In the case of unlink, light will flash 10 times for confirmation.

LENNY-MD-092 4 ZONES control

Smart LED control system

Mobile phone pairing

The application allows us to create groups with different receivers. This will allow us to control several receivers at the same time: turn ON / OFF / change the color, etc.

Group name

Save

Indicate which type of LED strip we are controlling.

All receiver list

Indicate which controllers you want to put in the same group.

Define led type:
Monochrome
Tunable white
RGB
RGB+white
RGB+tunable white

Once we have linked our receiver we can change our device name. This is interesting if we are going to control it with Alexa, Google Assistant or Google Home.

To do so, we press and hold name of the device on the screen and move it to the left. We will see an "edit" and a "delete". Click on "Edit", change the name and "Ok".

fullwat®
by Mi·Light®

LENNY-MD-092 4 ZONES control
Smart LED control system

ALEXA linking

To control system with Alexa, a wifi gateway is required, either built into receiver or using LENNY-WIFOX1 gateway.

Install Alexa app and log in using your account.

We need to install Mi-Light Smart skill. To do so:

| Click on "more" and select "Skill and games". | In the search engine type "Mi-Light Smart" and click on this option. | We allow application using. | Log in with your MiBoxer data. | If everything is correctly done, we will see a message of successful linking |

Once reached step as above, Alexa will detect our receiver automatically and we will be able to change its name, include it in a group or control it by voice.

If receiver is not detected automatically , we can push "detect devices" via Alexa app function.

Now you can work with standard ALEXA managing.
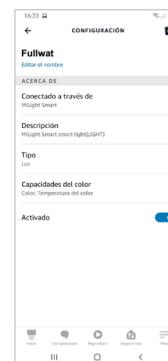

We can rename device to be able to control that device only instead the whole group, command Alexa to turn off/on the device, etc.

LENNY-MD-092 4 ZONES control

Smart LED control system
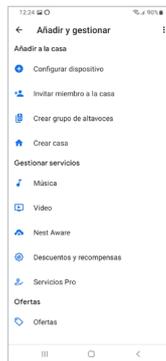

GOOGLE HOME linking

To control system with Google Home, a wifi gateway is required, either built into the receiver or using LENNY-WIFOX1 gateway.

Install Google Home app and log in with your Google account. If you have not yet configured your home, you can do this now or later.
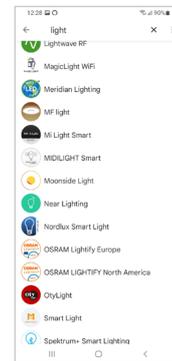

We need to install Mi-Light Smart skill. To do this:
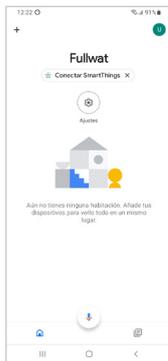

Click on "more".

Select "Configure device".

Look for the "Mi-Light Smart" application in the list of applications.

You may get a link warning message.
Click on "Link" to accept.

Log in with your MiBoxer data.

If we do it correctly, a successful linking message will appear.
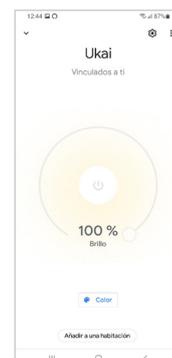

Once we have reached this point, the linking is done.

On the main Google Home screen, our home will appear with our device.

We can rename device to make "name it" easier.

Clicking on the device icon, you are reaching another page where you can control the lights too.

LENNY-MD-092 4 ZONES control

Smart LED control system

GOOGLE ASSISTANT linking

To control system with Google Assistant, a wifi gateway is required, either built into the receiver or using LENNY-WIFOX1 gateway.

And Install Google Assistant application via PlayStore on your phone:

We must configure it to recognize your voice. Then enter "settings" in the application and click on "Voice Match".

The application will ask you to repeat two phrases several times.

Once this is done, we will be able to "call" our device using "Ok Google". For example, "Ok Google turn on Fullwat" and LED strips connected to Fullwat receiver will light up properly.
